

SMB tailored Business Continuity solution

SmartStyle MirrorCloud is an SMB tailored advanced Business Continuity solution for Windows servers and desktops. MirrorCloud is delivered as a turnkey solution, that can be setup without complex integrations. Business continuity has never been so simple and easy to manage. On board wizards, built-in backup, monitoring and support from our Network Operations Center allow a super fast installation.

The solution ensures you never lose data again thanks to its built-in reliability and high availability. This is expressed by the fact that you can recover data from seconds before the error and can be up and running in no time with a quick standby server. This eliminates costly downtime due to server hardware failure. Additionally, MirrorCloud will send the backups off-site to a secured datacenter facility.

Modular and Scalable

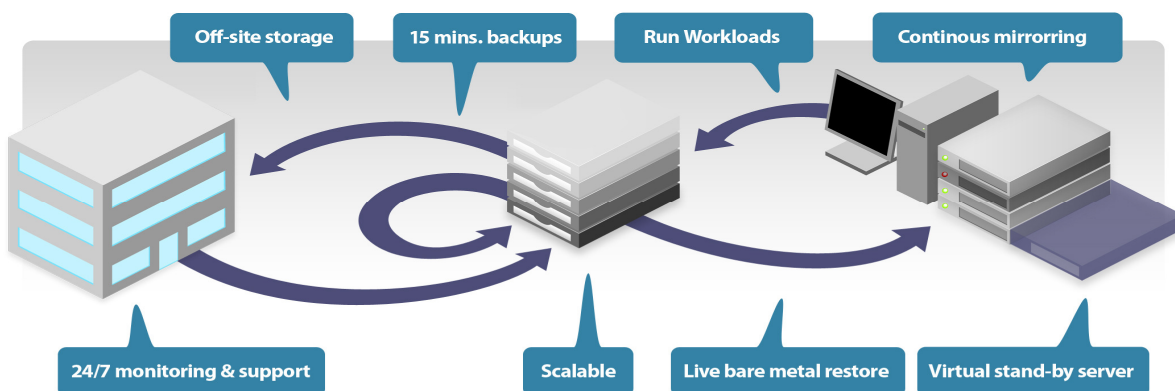

MirrorCloud is built on the modular and scalable SmartStyle Computing platform which allows to add storage and CPU capacity when needed. Start with 1 node and as the demand for storage increases add more nodes. The underlying BitSpread storage technology stores data in a storage pool across all nodes. In case of a disaster you can add extra nodes for extra virtualization capacity.

MirrorCloud's on board technology can be used to build out a private local cloud. By using your business continuity solution as cloud you can extend your Client's Hardware Lifecycle and enable additional services without significant cost. With Business Continuity moving to the cloud, traditional tape and disk solutions are showing their limitations. As a private cloud-based business continuity solution, SmartStyle MirrorCloud provides high availability, high performance, and a seamlessly expandable architecture.

Offer SmartStyle MirrorCloud to your customers as part of a rock solid Business Continuity plan!

- All in one: Hardware, Software & Services
- Backup for Windows Servers and Desktops
- Continuous Data Mirroring
- Built-in Snapshotting
- Near instant Standby server
- Bare Metal Restore
- File and Folder level restores
- Message or Exchange object recovery
- Off-site replication of the data
- Ready for Private Cloud Activation
- Scale as you grow
